Electromagnetic Field Theory Fundamentals Bhag S. Guru, Hüseyin R. Hızıroğlu, 1998. This book presents a new student oriented perspective on the study of electromagnetic fields. It has been built from the ground up using clear explanations of basic concepts with coverage of vector analysis as needed. Numerous exercises, worked examples, review questions and chapter ending summaries with equations that effectively bridge the gap between formal theories and their practical applications. The result is a uniquely student oriented text that builds student's problem solving skills and an intuitive understanding of the subject. The book begins in Chapter 1.6 with an introduction to static fields such as electrostatic fields, magnetostatic fields and fields produced by steady currents. The book presents developments of Maxwell's equations in both the time and phasor frequency domains in Chapter 7 and then deals with the propagation, transmission and radiation of electromagnetic fields in a medium under various constraints.
