Electromagnetic Waves, Materials, and Computation with MATLAB Dikshitulu K. Kalluri, 2012 Preface The subject of electromagnetics is still a core subject of the undergraduate electrical engineering EE curriculum however at most of the universities in United States the time allotted to teach it is cut into half one 3 credit course instead of two. The present graduates with BS degree in EE being rushed through the same curriculum content in a shorter time often miss the concepts and depend on a lot of formulas which they use as a recipe for some calculations based on an example worked out in the book. Some of them are fortunate to take a follow up special elective course in microwaves or RF design or antennas or fiber optics and so on thus partly reinforcing one application area. Readily available commercial software allows them to do routine calculations and design without having a conceptual understanding of the expected solution. The commercial software is so user friendly that we usually get a beautiful colored visualization of the solution even if it is a wrong simulation of the physical problem. After getting one or two mild reprimands from the boss in his new employment after graduation the new graduate realizes that he needs to have a fairly good idea of what is the appropriate model to be simulated and what qualitative result is to be expected. Though the software is very useful it is not a substitute for a conceptual understanding of the steps involved in solving the problem. Fortunately for him there is probably a university which offers graduate courses and there is an instructor professor who understands that these bright students recruited by some of the top companies are not less smart than the employees recruited by the company say a decade or two ago

Electromagnetic Waves, Materials, and Computation with MATLAB®, Second Edition, Two Volume Set Dikshitulu K. Kalluri, 2017 This two volume set consists of Principles of Electromagnetic Waves and Materials Second Edition and Advanced Electromagnetic Computation Second Edition. Volume I takes an integrative approach to the subject of electromagnetics by supplementing quintessential old school information and methods with MATLAB software. Volume II consists of advanced electromagnetic computation which focuses on Algorithms of Finite Differences, Moment Method, Finite Element method and Finite Difference Time Domain method. Hand computed simple examples and MATLAB coded simple examples with only a few elements are used to explain the concepts behind the algorithms. Four new chapters are included. Provided by publisher

Science Abstracts, 1995 Computational Electromagnetics with MATLAB, Fourth Edition Matthew N.O.

Sadiku, 2018-07-20 This fourth edition of the text reflects the continuing increase in awareness and use of computational electromagnetics and incorporates advances and refinements made in recent years. Most notable among these are the improvements made to the standard algorithm for the finite difference time domain (FDTD) method and treatment of absorbing boundary conditions in FDTD finite element and transmission line matrix methods. It teaches the readers how to pose numerically analyze and solve EM problems to give them the ability to expand their problem solving skills using a variety of methods and to prepare them for research in electromagnetism. Includes new homework problems in each chapter. Each chapter is updated with the current trends in CEM. Adds a new appendix on CEM codes which covers commercial and free codes.
