

Structure of electrical/electronic system

The electrical equipment on this vehicle makes use of the Small 2 architecture developed specifically to integrate the most sophisticated electronic functions in the most efficient way.

This structure makes up the car's "nervous system", directly controlling all the bodywork functions (access control, visibility, on board information, comfort, etc.) and communicates with the various chassis and power unit subsystems, improving system fault diagnosis, reliability, weight and cost. A further advantage compared with traditional systems is the simplification of the fitting through the reduction in the number of control units (in line with the functions offered to the customer) and the number of power and signal connections, through the extensive use of serial communication networks (2 CAN dual wire networks, 1 LIN single wire network, 1 A-BUS single wire subnetwork).

Power distribution takes place by means of four junction and relay fuse boxes, connected to the control elements (static actuators and relays). These boxes also act as an interconnection for the wiring and as an electrical distributor to ensure the maximum level of electrical protection and the minimum degree of wiring complexity.

It is a simplified version of the previous "MINI FLORENCE" system: the structure has been simplified to manage a greater number of functions with the Body Computer.

The main electronic components managed by the architecture are listed below:

B-CAN network

C-CAN network

- NBC Body Computer node
- NGB Electric steering node
- NFR Brake node
- NCM Engine control node
- NFA Self-Adaptive Lighting Node
- NSC Gear Selector Node (TCT)
- NCA Automatic Transmission Node (TCT)
- NQS Instrument panel node
- NAB Air Bag node
- NSP Parking sensor node
- NAG Driver's Seat Position Node
- NAP Passenger's Seat Position Node
- NRR Radio receiver node
- RNM Map radio navigator
- NCV Bluetooth control unit node
- NCL Climate control node
- EOBD Diagnosis connector
