

**Earth electrode** is a metal plate or other conducting elements of electricity partially buried in the earth to constitute and provide a reliable conductive path for the fault current to the ground.

**Ideal source** includes an ideal voltage source and ideal current source. An ideal source is a theoretical concept of an electrical current or voltage supply (such as a battery) with no losses and a perfect voltage or current supply. Ideal sources are used for analytical purposes because they cannot occur in nature.

**Cell** is a device containing electrodes immersed in an electrolyte, used for generating current or for electrolysis.

**Resistor** is a device that has resistance to the passage of an electric current.

**Battery** is a container consisting of one or more cells, in which chemical energy is converted into electricity and used as a source of power.

**Capacitor** is a device used to store an electric charge, consisting of one or more pairs of conductors separated by an insulator.

**Source** is a part of a field-effect transistor from which carriers flow into the inter-electrode channel.

**Antenna** is an electrical device which converts electric power into radio waves and vice versa.
