### Description

The Electro-Voice Sb180 is a 600-watt subwoofer loudspeaker system which combines the attributes of both horn-loaded and vented-box designs. It utilizes the unique SubScoop™ cabinet construction with a EVX-180B woofer, as used in the X-Array® concert systems. The design behaves like a horn over much of its range, but without the time delay and weight problems usually associated with conventional designs. Vented-box principles take over for the lowest octave and assist in producing exceptionally high levels of clean, punchy bass from a sub-compact box. The reverse woofer orientation has been used to optimize the rear chamber volume and decrease the horn flare rate for extended low-end performance.

The Sb180 can be used to augment the bass performance of any Electro-Voice stage system. (This may involve the use of appropriate electronics and crossovers.) A 1 $\frac{3}{4}$ -in. stand-mount receptacle on the top surface of the Sb180 allows satellite speaker systems such as the Sx500 and Sx300 to be used (see Figure 4).

### Use in Multiples

The Sb180 may be used in multiples to increase acoustic output. A 6-dB increase in maximum acoustic output occurs when two speaker systems are placed side by side and paralleled, yielding a 4-ohm load. For operation at very-low frequencies, the woofer cones "mutually couple," acting as one system with twice the effective cone area and power-handling capacity of a single system. Increasing the cone area doubles the efficiency, providing a 3-dB increase in sound pressure level. The doubled power capacity provides the potential for an additional 3-dB gain in maximum acoustic output.

Mutual coupling occurs when the frequency is such that the center-to-center distance between the two woofer manifolds is less than about one-half wavelength. When the distance is greater than one-half wavelength, as would occur if two Sb180's were widely spaced, the level increase tends to be limited to the 3-dB power-handling increase.

The woofer is connected using one of the Neutrik Speakon® jacks marked "Input." Electro-Voice recommends the Neutrik NL4MPR-V connector be used in most high-power situations. A parallel woofer can be

connected using the other connector. Care must be taken not to abuse the amplifier by connecting impedances which are too low.

### Crossovers and Amplifiers

To optimize performance, the Sb180 should be used in conjunction with an active crossover with a minimum slope of 12-dB per octave and a crossover frequency in the range of 100 to 250 Hz. Due to the high efficiency of the Sb180, less amplifier input is needed to achieve a given sound output level. The high power-handling capacity of the Sb180 permits the use of amplifiers with a rating of up to 1,200 watts rms into 8 ohms.

### Speaker Protection

When in the vented-box mode, the SubScoop™ like all other vented systems, experiences rapidly increasing cone excursion below the box-tuning frequency. The acoustic output is also decreasing rapidly; therefore, it is sensible to protect the Sb180 and maximize the power output of the subwoofer by inserting an active 32-Hz high-pass filter with a slope of at least 12-dB per octave into the circuit. Such subpassband filters are found in many commercially available crossovers and equalizers including items manufactured by Electro-Voice.
