**Extinct Madagascar** Steven M. Goodman, William L. Jungers, 2014-09-04 The forests of Madagascar are legendary for their incredible biodiversity and the mammal fauna in particular is far more diverse and largely endemic than most places on earth A new carnivorous mongoose was discovered recently dubbed Durrell's *Viverra zosterophora salanoia durrelli* after the late British conservationist Gerald Durrell and it is one of just many of this extraordinary group But with each new find so too is Madagascar experiencing alarming extinction rates and the forests have lost in recent time hundreds of charismatic and ecologically and evolutionarily distinct species *Extinct Madagascar* explores the recent past of Madagascar mammals introducing readers to the geologic and ecological history of Madagascar providing the context for mammalian evolution and diversification Originally commissioned color plates depict species and entire communities and reconstruct a recent past in part to remind us all what is at stake in current and future conservation of these incredible faunas **Evolution of Island**
