Extreme Fear Jeff Wise, 2025-10-16 Ever since the phrase fight or flight was coined in the 1920s the common understanding has been that the mind respond to danger in one of two ways either fleeing in blind panic or fighting through it But as scientists unlock the secrets of the human brain a more complex understanding of the fear response has emerged It turns out that the ancient brain circuitry wired to process fear is also intricately tied to our ability to master new skills and that the icy sensation of terror can actually enhance both our physical and our mental performance Veteran science journalist Jeff Wise who writes the I ll Try Anything column for Popular Mechanics journeys into the heart of the primal force to find its hidden roots Where does panic come from How is it that some people can perform masterfully under pressure How can we live a more courageous life Reporting from the front lines of science Wise takes us into labs where scientists are learning how we make decisions when confronted with physical peril how time is perceived when the mind is on high alert and how willpower succeeds or fails in controlling fear Along the way he illuminates the science with riveting stories of true life danger and survival We watch a woman defend herself from a mountain lion attack in a remote canyon we witness couple desperately fighting to beat back an encircling wildfire we see a pilot struggle to maintain control of his plane as its wing begins to detach Full of amazing characters and cutting edge science **Extreme Fear** is an original and absorbing look at how we can raise the limits of human potential Travel & Leisure ,2010 The Science of Fear Dan Gardner,2008 An analysis of the scientific causes of irrational fear offers insight into the brain s role in causing people to experience and react to fear in a report that explains how heightened fear in the post 9 11 world is dangerously intersecting with biologically driven responses **The Science of Fear** Daniel Gardner,2008-07-17 An invaluable resource for anyone who aspires to think clearly The Guardian from the New York Times bestselling author of Superforecasting and Future Babble From terror attacks to collapsing economies from painkiller epidemics to mass gun violence and poisonous toys from China our list of fears seems to be exploding Yet we are the safest and healthiest humans in history Why are we so worried The Science of Fear is an introduction to the new brain science of risk dissecting the fears that misguide and manipulate us every day Award winning journalist Dan Gardner demonstrates how irrational fear springs from the ways humans miscalculate risks based on our hunter gatherer brains With the exclusive cooperation of risk science pioneer Paul Slovic and other leading experts Gardner reveals how our gut reactions lead us astray Understanding our irrational fears frees us from political and corporate manipulation and makes our choices better Ultimately The Science of Fear will make you brave Excellent Analyzes everything from the media s predilection for irrational scare stories to the cynical use of fear by politicians A cheery corrective to modern paranoia The Economist An entertaining often jolting account of why trivial risks terrify us even as we engage in wildly dangerous activities with hardly a qualm Kirkus starred review Elegantly weaves academic research and everyday experience exposing the secrets of emotion and reason and the essential roles they play on our lives An excellent
