successful combined arms regimental combat teams and made advances in night operations Wheeler describes the First Division's critical role in postwar Germany and as the only combat division in Europe during the early Cold War After returning to the United States at Fort Riley Kansas the division fought valiantly in Vietnam for five trying years successfully protecting Saigon from major infiltration along Highway 13 while pioneering air mobile operations It led the liberation of Kuwait in Desert Storm and kept an uneasy peace in Bosnia and Kosovo Along the way Wheeler illuminates the division's organizational evolution its consistently remarkable commanders and leaders and its equally remarkable soldiers

Combined Arms Warfare in the Twentieth Century Jonathan Mallory House, 2001

For centuries the world has witnessed the development and use of increasingly complex and powerful military systems and technologies In the process the art of war has truly become the art of combined arms warfare in which infantry artillery air support intelligence and other key elements are all coordinated for maximum effect Nowhere has this trend been more visible than in the history of twentieth century warfare Originally published as an essential in house study for U S Army officers during the 1980s this much revised and expanded edition remains the most complete study available on the subject Rewritten with a much wider readership in mind it both retains its enormous practical utility for military professionals and provides a valuable and appealing introduction for scholars and general readers Jonathan House author of the original work brings the story of combined arms up to the present covering among other things Desert Storm the war in Chechnya and the rise of smart weapons and related technologies He traces the evolution of tactics weapons and organization in five major militaries American British German Russian and French over 100 years of warfare Revealing both continuities and contrasts within and between these fighting forces he also provides illuminating glimpses of Israeli and Japanese contributions to combined arms doctrine Expanding his insightful analysis of the world wars and the wars in Korea and Vietnam House also offers much new material focused on the post Vietnam period Throughout he analyzes such issues as command and control problems of highly centralized organizations the development of special operations forces advances in weapons technology including ballistic and anti ballistic missile systems the trade offs involved in using heavy versus light armed forces and the enduring obstacles to effective cooperation between air and land forces His strong critique of the air superiority propaganda that came out of the Gulf War is sure to spark some heated debates Rigorously comparative House's study addresses significant questions about how nations prepare for war learn or don't learn its harsh lessons and adapt to changing times

and technologies Unique in the annals of the literature on warfare it will be the standard work on this subject for a long time to come

U.S. Amphibious Ships and Craft Norman Friedman, 2002 In this latest addition to his acclaimed U S warship design history series Norman Friedman describes the ships and the craft of the U S amphibious force from its inception in the 1920s through World War II to the present He explains how and why the United States successfully created an entirely new kind of fleet to fight and win such World War II battles as D Day and the island landings in the Pacific To an extent not previously documented his book lays out the differing views and contributions of the U S Army Navy and Marines as well as the British and how they affected the development of prewar and wartime amphibious forces Current and future amphibious forces and tactics are explained together with their implications for ships and craft from 40 000 ton amphibious carriers down to tracked amphibious vehicles As in earlier volumes in the series this study uses previously unpublished sources to illustrate not only what was actually built but what was planned and never brought into service For example the book offers the first comprehensive and fully illustrated account of abortive attempts in the 1960s and beyond to build new fire support ships LFS With nearly two hundred photographs and specially commissioned line drawings and extensive appendixes the work conveniently brings together details of the ships and their service histories found elsewhere only in scattered official references
